 - CNN Fear & Greed Index on Stock & Crypto
 - VIX index on Stock & Crypto
 - Market Index & Sector index changes
 - Price chart/ histogram
 - Display stock or etf price, volume,rsi chart/graph on ticker input
 - ***FUTURE: on selection on Stock indicator (available to change display it on top of price chart***
 - ***EX: MA w/ any integer input,Fibonacci retracement, EMA***
 - ***Open to be used for ML stock trading model training***
 - General Strategy backtesting / Simulator
 - Strategy 1: JY model - Stride & Option stride
 - Strategy 2: DRIP option on investment
 - Different options available including sell on Fear & Greed or VIX or RSI and etc
 - Allow general usage by having strategy as input
 - Politician trade / portfolio tracker (13F profile)
 - ETF rebalance update
 - Check for newly added investment
 - Stock price prediction model & ML Quant scoring models
 - EX: LSTM

Data source

-

Utilize yfinance API for data collection

Work list

1. yfinance API analysis
2. Understanding influencer perspectives

Project timeline

1. Phase 1 : General Dashboard & Analysis
 - a. yfinance API analysis
 - b. General information & general LLM analysis report

- c. Market Analysis & Daily market index
 - d. Interactive price chart/histogram
- 2. Phase 2 :
 - a. Understanding investment influencer perspectives
 - b. Strategy backtesting/simulator system
 - i. Price history,
 - ii. *Monte Carlo simulator(?) Time series prediction?*

iii.

quant / portfolio dashboard

Structure

- Stocks
 - general_Information : DataFrame
 - balance_sheet
- Etf's
 -
